Usage notes for the CII schema according to EN16931-3-3.....	28

Factur-X Specification 1.01.06 (ZUGFeRD 2.2) - Technical Appendix

Structure of the CII schema according to EN16931-3-3

	CrossIndustryInvoice	Invoice
1 .. 1	ExchangedDocumentContext	Process Control
0 .. 1	TestIndicator	Test indicator
1 .. 1	Indicator	Test indicator, value
0 .. 1	BusinessProcessSpecifiedDocumentContextParameter	Grouping of business context information
1 .. 1	ID	Business process, value
1 .. 1	GuidelineSpecifiedDocumentContextParameter	Grouping of application recommendation information
1 .. 1	ID	Specification Identifier
1 .. 1	ExchangedDocument	Grouping of characteristics that affect the entire document
1 .. 1	xs:sequence	
— ID		Invoice Number
— Name		Document name (free text)
— TypeCode		Document name (Code)
— IssueDateTime		Invoice date
— xs:choice		
— DateTimeString		Invoice date, value
— format		Date, format
0 .. 1	CopyIndicator	
1 .. 1	xs:choice	
— Indicator		
— LanguageID		Language identifier
0 .. unbounded	IncludedNote	Free text on header level
0 .. unbounded	xs:sequence	
— ContentCode		Free text on header level (qualifying the content)
1 .. 1	Content	Freetext on document level (Content)
0 .. 1	SubjectCode	Code for qualifying the free text for the invoice
0 .. 1	EffectiveSpecifiedPeriod	Contractual due date of the invoice
1 .. 1	xs:sequence	
— CompleteDateTime		Contractual due date of the invoice
— xs:choice		
— DateTimeString		Contractual due date of the invoice, Value
— format		Date Format
1 .. 1	SupplyChainTradeTransaction	Grouping of information about the business transaction
0 .. unbounded	xs:sequence	
— IncludedSupplyChainTradeLineItem		Grouping of item information
— xs:sequence		
— AssociatedDocumentLineDocument		Grouping of general position information
— xs:sequence		
— LineID		Identifier of the invoice line item
— ParentLineID		Parent Line ID
— LineStatusCode		Type of the invoice line item (Code)
— LineStatusReasonCode		Subtype of the invoice line item
— IncludedNote		Detailed information about the free text of the line item
— xs:sequence		
— ContentCode		Free text of the line item (Content Code)
— Content		Free text of the line item
— SubjectCode		Free text of the line item (Type Code)
1 .. 1	SpecifiedTradeProduct	Item information
0 .. 1	xs:sequence	
— ID		
— GlobalID		Identifier of an item according to a registered scheme

Code of the measurement unit of the invoiced quantity	
unitCode	Data type: xs:token Description: The valid measurement for the invoiced quantity. Note: The measurement must be selected from the lists of UN/ECE Recommendation No. 20 „Codes for Units of Measure Used in International Trade“ und UN/ECE Recommendation No. 21 „Codes for Passengers, Types of Cargo, Packages and Packaging Materials (with Complementary Codes for Package Names)“, in accordance with the procedure described in UN/ECE Rec No.20 Intro 2.a). Please note that, in most cases, it is not necessary for buyer or seller to fully implement these lists in their software. Sellers only need to support the services required for their goods, buyers only need to check that the units of measurements used on the invoice match those in other documents (like contracts, catalogues, purchase orders or shipping notification). Cardinality: required EN16931-ID: BT-130 Use: In particular, the following codes may be used: LTR = litre (1 dm ³) MTQ = cubic metres KGM = kilogram MTR = metres H87 = item TNE = ton

Use in:	X	X	X	X	X	X		
PaymentReference								Remittance information
Data type: udt:TextType								
Description: A textual value used to establish a link between the payment and the invoice, issued by the seller.								
Note: This information element helps the seller to assign an incoming payment to the relevant payment process. When specifying the textual value, which commonly is the invoice number of the invoice being paid, but may be another seller reference, the buyer should indicate this reference in his payment order when executing the payment. In a payment transaction this reference is transferred back to the seller as remittance information. In order to allow for automatic processing of cross-border SEPA payments, only Latin characters should be used in this field, with a maximum of 140 characters. Reference section 1.4 of the SEPA direct debit scheme implementation guides [13] and [14] for details of the allowed characters. Other rules may apply for SEPA payments within national borders. If the transfer information for the structured reference of the payee is structured according to ISO 11649:2009, the information must be assigned to SEPA-payment messages in the field "Structured Remittance Information Creditor Reference". If the transfer information is structured according to EACT for automatic account reconciliation, the information must be assigned to SEPA-payment messages in the field "Unstructured Remittance Information". If the transfer information is assigned to the fields "End To End Identification" or "Structured Remittance Information Creditor Reference", the content, except for the limitation of Latin characters, shall not begin or end with ',' and it shall not contain '/.'								
Synonym: Purpose, payment number								
Cardinality: 0 .. 1
